

Practical No: 03

Write a program to implement Stemming.

```
In [2]: print("125 Prosenjeet Shil")
```

125 Prosenjeet Shil

```
In [4]: from nltk.stem import PorterStemmer
port_stemmer=PorterStemmer()

print(port_stemmer.stem("Liked"))
```

like

```
In [6]: data=["liked","liking","likes","killing","killed","Studying","Changing"]
for words in data:
    print(words," :",port_stemmer.stem(words))
```

liked : like
liking : like
likes : like
killing : kill
killed : kill
Studying : studi
Changing : chang
